

A**Conventional PTQ**

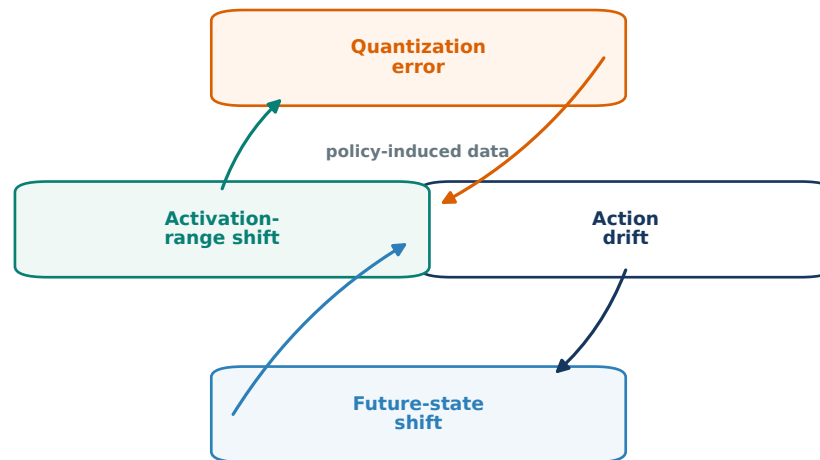

exogenous data

Assumption: deployment inputs follow calibration data

B**Quantization-control loop**

endogenous data

The policy changes the data used to evaluate it

C**Full-context response**

policy-level

Precision allocation

Action-weighted CS-CKA
hard guards • exact bytes

Full-context verification

Physical sequence + complete policy
propose locally • may abstain

Deployment adaptation

Input-conditioned channelwise A8
no frozen range lookup

allocate under budget × audit in context × adapt at deployment
